

**Make E-mail a Secure
and Productive Tool!**

It's Not Your Imagination!

E-mail has become the Achilles Heal of your network. Incoming spam has turned a productive communication tool into a time drain for all your users. Meanwhile your most embarrassing virus outbreaks have been thanks to e-mail, and now you've got users wanting to e-mail sensitive information!

- How do you know your users aren't already sending sensitive information in e-mail?
- How do you communicate with your business partners in a secure fashion?
- How do you comply with SEC regulations related to e-mail archiving and monitoring?
- How do you ensure that you are complying with the CAN-Spam laws?

Offsite Processing!

Sifter Plus processes all incoming *and* outgoing e-mail for a domain off site! This feature is important because incoming e-mail is directed to *our* redundant servers at our secure data centers first, and then it is directed to you. This allows us to strip spam and most viruses BEFORE e-mail enters your network. Therefore, you get the times savings as well as the bandwidth savings, with an extra layer of virus protection.

What Sifter Plus Can Do:

- ✓ Filters unwanted e-mail (spam) using many methods, including Bayesian Filtering techniques that learns as you confirm spam/ham status.
- ✓ Adds an extra layer of virus protection.
- ✓ Cleans your e-mail of spam and viruses BEFORE it enters your WAN/LAN.
- ✓ Increases productivity and reduces risk associated with sensitive information sent via e-mail.
- ✓ Outgoing E-mail Content Filtering.
- ✓ Provides a secure E-mail Engine.
- ✓ Features CAN-Spam Act Processing.
- ✓ Can provide E-mail Archiving.
- ✓ Facilitates monitoring with a Compliance or Auditing Monitoring Queue.

Ask for a Demo!

We have an on-line demo available. If you are interested in previewing **Sifter Plus**, please give us a call! A username and password will be provided to you for Demo access.

- 1 Is Easy to Use!**
 - 2 Saves Money\$\$\$**
 - 3 Saves Time!**

Outgoing E-mail Content Filtering

Sifter Plus scans each outgoing e-mail message and looks for sensitive information. If found, it quarantines the message with a notice sent to the appropriate person. If the e-mail is deemed acceptable, it can be re-sent from quarantine. Otherwise, it can be sent as a Secure E-mail.

Secure E-mail

If "secure" is put in the subject line of the e-mail message, **Sifter Plus** will hold that message in a secure quarantine. A message will be sent to the recipient indicating that they have secure e-mail. The recipient can then "authenticate" and respond to the e-mail securely.

CAN-Spam Act Processing

When a financial institution's customer opts out of marketing information, the opt-out message would also go to the **Sifter Plus** database for the client. Thus, any future mailings to this customer would be quarantined with a notice sent to the appropriate department.

E-mail Archiving

Sifter Plus can create an ISO image of all incoming and outgoing e-mail. This will be burned to web-browsable read-only media for the client on a regular basis. This feature, required for some SEC regulated companies, is a custom feature and is provided at an additional cost to the client.

Compliance Queue

This feature facilitates the monitoring of e-mail by the compliance personnel as per SEC requirements. As it is required for only some SEC regulated companies, it is a custom feature and is provided at an additional cost to the client.
